Website Performance and Security Checklist

Website performance and security are two intertwined pillars crucial for your online presence. A fast-loading, responsive site builds trust and ensures user satisfaction; while robust security measures protect your business assets and user data. This checklist will help ensure that your website meets the highest standards in both performance and security.

Site Load Speed

- Website (mobile & desktop) load speed is within target range (use Google PageSpeed Insights).
- Website is free of serious performance inhibitors.

SSL/TLS Certificate

- Website uses HTTPS for secure communication.
- Certificate is valid (i.e., no “not secure” browser warnings).

Content Delivery Network (CDN) Integration

- Using a CDN to distribute website content to reduce latency and improve site load times.

Mobile Optimization

- Website is responsive and user-friendly on mobile devices.
- Mobile load times is within target range.
- Site user experience is consistent across various screen sizes.

Regular Backups

- Are regularly backing up website based on a schedule.
- Backups are stored securely, and the restoration process is periodically tested.

Distributed Denial of Service (DDoS) Protection

- Have measures to detect and mitigate Distributed Denial of Service attacks.

Code, CMS & Plugin Updates

- Code base is up to date.
- All Content Management System (e.g., WordPress, Joomla) versions/plugins/extensions are up to date.

Online Forms Functional & Secure

- All online forms (including integrations) are functioning as intended.
- Online forms have bot prevention (like reCAPTCHA) & function properly.

User Access & Permissions

- Using strong passwords and two-factor authentication for all logins.
- User permissions regularly audited, with only necessary permissions granted.

Security Audits

- We have a regular cadence of security audits scheduled.
- We regularly scan for malware or suspicious activities.
